According to this study, the global CMF Surgery Planning and Simulation System market size will reach US$ 134 million by 2031.

CMF (Cranio-Maxillo-Facial) Surgery Planning and Simulation System is a computer-assisted system designed to provide preoperative planning and intraoperative simulation support for cranio-maxillofacial surgery. The system obtains imaging data (such as CT, MRI, etc.) of the patient's lesion site, combines three-dimensional reconstruction, simulation modules and intelligent hardware, and generates an intelligent planning program that includes information such as surgical methods, processes, procedures, paths, and instrument selection. The system can predict surgical results and assist doctors in formulating more accurate surgical plans, thereby shortening surgical time, improving surgical accuracy, and reducing the risk of complications.

United States market for CMF Surgery Planning and Simulation System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for CMF Surgery Planning and Simulation System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
