The global CMP Polisher Mainframe market size is predicted to grow from US\$ 4160 million in 2025 to US\$ 7995 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

The CMP Polisher Mainframe is the central equipment used in the Chemical Mechanical Planarization (CMP) process for semiconductor wafers. It achieves wafer surface planarization by applying controlled pressure on the polishing pad while using a slurry containing chemical agents and abrasives, ensuring uniform material removal and smooth surface finish. This precise planarization is critical for subsequent microelectronic device fabrication. The CMP polisher mainframe typically consists of a polishing platen, carrier head, pressure control system, rotation control system, and slurry delivery system. In 2025, global CMP polisher production reached approximately 2,126 units, with an average global market price of around US\$ 2 M per unit. Annual production capacity is 2,275 units. Gross Profit Margin: 18%. The CMP polisher industry chain is highly specialized and vertically integrated. Upstream mainly consists of precision mechanical components, high-purity metals, slurry and pad materials, and automation control systems. Core manufacturing is concentrated in a handful of global OEMs, such as Applied Materials, Ebara, and Hwatsing Technology, who supply the main polishing platforms. Downstream, the primary consumers are semiconductor fabs producing logic, memory, and advanced packaging devices, where CMP is critical for wafer planarization. Supporting services, including maintenance, consumables, and process optimization, also form an important part of the ecosystem. CMP polishers are a strategic and indispensable asset in semiconductor manufacturing. The combination of high unit price, long lifecycle, and critical role in multi-layer wafer planarization makes them a high-barrier, high-margin product. As semiconductor technology advances towards smaller nodes and 3D structures, demand for advanced CMP systems will

continue to grow, creating opportunities for innovation in automation, precision, and integration with fab-wide process monitoring.
