The global CMP Polishing Pad Conditioner market size is predicted to grow from US$ 339 million in 2025 to US$ 531 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

CMP Polishing Pad Conditioner is a critical tool designed to maintain the surface performance of CMP polishing pads. It typically employs ultra-hard materials (e.g., diamond) as abrasives to mechanically remove glazed layers and debris from the pad surface, restoring its roughness and porosity to ensure consistent material removal rates (MRR) and uniform wafer surface planarization during polishing. Widely used in semiconductor, optical glass, and precision ceramic manufacturing, it directly impacts the precision and efficiency of CMP processes.

The demand for CMP polishing pad conditioners is primarily fueled by the continuous advancement of the semiconductor industry. With the rapid development of emerging technologies such as 5G, AI, and IoT, there is surging global demand for chips with smaller nodes and higher integration density, which directly drives the need for high-precision CMP processes and related consumables. Particularly for advanced nodes at 3nm and below, where wafer surface planarity requirements reach atomic-level precision, diamond conditioners with ultra-precise dressing capabilities have become indispensable. Additionally, the fast adoption of third-generation semiconductor materials like silicon carbide (SiC) and gallium nitride (GaN) in power devices is creating new growth opportunities for CMP conditioners.

The CMP conditioner market is currently exhibiting three major trends: First, ongoing technological upgrades including nanoscale diamond particles, orderly arranged grit technology, and new composite materials to meet demands for higher precision and

longer service life. Second, the green manufacturing concept is driving the development of recyclable dressing technologies and eco-friendly materials to reduce waste in semiconductor production. Third, a clear trend toward supply chain localization is emerging, as geopolitical factors prompt countries to strengthen self-sufficiency in critical semiconductor consumables. Looking ahead, with the development of advanced packaging technologies like chiplet, the CMP conditioner market is poised for another wave of growth.
