CNC Broaching Machine is a metal cutting machine tool that controls the movement of the broach through a computer numerical control system (CNC). Its core principle is to use the linear or spiral movement of the broach to perform efficient and high-precision cutting of the workpiece to form complex shapes such as inner holes, outer surfaces, keyways, splines, gears, etc. CNC broaching machines combine the efficient cutting capabilities of traditional broaching machines with the automation and flexibility of CNC technology, and are suitable for high-precision, large-volume or customized production needs.
