The global CNC Drilling Machine for PCB market size is predicted to grow from US\$ 701 million in 2025 to US\$ 1151 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

A CNC Drilling Machine for PCB is a computer-controlled mechanical drilling machine used to create precise holes in printed circuit boards. It uses high-speed spindles and micro drill bits to drill through-holes, component holes, positioning holes, and other required holes on rigid PCB, flexible PCB, HDI boards, automotive PCB, communication PCB, and server PCB. Compared with manual or conventional drilling equipment, CNC PCB drilling machines offer higher positioning accuracy, better consistency, higher productivity, and stronger automation, making them essential equipment in modern PCB manufacturing. In 2025, global CNC Drilling Machine for PCB production reached approximately 4769 units with an average global market price of around 150.2 k USD/unit. The production capacity for CNC Drilling Machine for PCB in 2025 was approximately 5000 units. The typical gross profit margin for CNC Drilling Machine for PCB is between 20% and 40%.

The CNC Drilling Machine for PCB market is driven by the continued growth of consumer electronics, automotive electronics, communication infrastructure, servers, AI computing hardware, and high-density PCB manufacturing. As PCB designs become more complex, with higher layer counts, smaller hole diameters, tighter tolerances, and greater demand for production efficiency, manufacturers increasingly require high-speed, multi-spindle, high-precision, and automated CNC drilling machines. Market demand is especially strong in Asia, where PCB production capacity is concentrated, while advanced applications such as servers, AI hardware, 5G communication equipment, and automotive electronics are pushing equipment upgrades toward higher

accuracy, higher throughput, and intelligent automation.
