## Abstracts

According to this study, the global CNC Drilling Services market size will reach US\$ 5621 million by 2031.

CNC drilling service is a manufacturing service that uses computer numerical control (CNC) machine tools to perform high-precision, automated drilling of metal, plastic, composite materials and other workpieces. This technology uses preset programs to control the drill bit's rotation speed, feed speed and positioning accuracy ( $\pm 0.01$ mm), and is suitable for mass production of complex hole types (such as multi-hole arrays, inclined holes, and deep holes). It is widely used in aerospace, automotive parts, PCB circuit boards, and building steel structures. Advantages include high processing efficiency (3-5 times faster than traditional drilling), strong consistency, and integrated laser detection for real-time quality monitoring.

United States market for CNC Drilling Services is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
