The global CNC Gantry Machining Center market size is predicted to grow from US$ 1638 million in 2025 to US$ 2201 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

The gantry machining center consists of a high-precision main structure spine bed, column, spindle head, cross slide and worktable. The gantry-type machining center is a precision metal processing machine that can handle multiple machining tasks at the same time. Regarding the milling process of the gantry-type machining center, it is the process of removing workpiece material using a rotating tool by pushing the tool into one or more workpieces. The cutting process can be carried out in different directions, which are based on boxes, just like a lathe is based on boxes. In addition to turning, milling also covers a variety of operations, from single tiny parts to heavy large milling tasks. The gantry-type machining center is designed to process large and thick workpieces. Under normal circumstances, these workpieces will bring huge and unbearable vibrations to the frame and cause uncontrollable deviations from the target accuracy.

United States market for CNC Gantry Machining Center is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for CNC Gantry Machining Center is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
