The CNC hoop bending machine is a highly efficient and intelligent equipment that integrates the functions of steel bar straightening, sizing, bending and shearing. It is mainly used for the automated processing of round steel bars in construction projects, and is particularly suitable for the forming of stirrups of various specifications. The equipment is controlled by a CNC system (such as a PLC or industrial computer), and can accurately perform processing tasks of various graphics, realizing multi-angle and multi-size steel bar bending operations. The equipment is widely used in engineering projects such as residential buildings, bridges, tunnels, high-speed railways, and prefabricated component plants. It not only significantly improves the efficiency of steel bar processing and the accuracy of finished products, but also greatly reduces labor costs and operational risks. Its core advantages include easy operation, high degree of automation, high bending accuracy, material saving, and adaptability to a wide range of graphics. It is one of the indispensable and important equipment in the field of modern construction steel bar processing.

United States market for CNC Hoop Bending Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
