CNC Programming Software is a specialized tool used to create, edit, and optimize the instructions that control Computer Numerical Control (CNC) machines, such as lathes, mills, routers, and grinders. This software translates detailed design specifications from CAD (Computer-Aided Design) models into precise machine commands, often in the form of G-code, which directs the CNC machinery on how to move, cut, shape, and finish the workpiece. CNC programming software allows for intricate and complex part geometries to be manufactured with high precision and repeatability. It typically includes features for toolpath generation, simulation, and optimization to ensure efficient and error-free machining processes. This software is essential in modern manufacturing, enabling the production of highly accurate and intricate parts across various industries, including aerospace, automotive, medical, and consumer goods.

United States market for CNC Programming Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
