The global CNC Scribing Machine market size is predicted to grow from US\$ 786 million in 2025 to US\$ 1396 million in 2031; it is expected to grow at a CAGR of 10.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A CNC scribing machine is a high-precision automated processing equipment controlled by a computer numerical control system. It mainly uses hard tools or diamond tools to perform linear or graphic scribing on the surface of materials. It is used to achieve precise scribing, slicing, scratching or marking process operations on brittle or hard materials such as glass, ceramics, sapphire, wafers, metal sheets, etc. The equipment is usually equipped with a high-resolution servo drive system, a visual positioning system and a multi-axis linkage work platform, which can achieve fast and accurate scribing of complex graphics, fine circuits, QR codes, etc. Compared with traditional manual or semi-automatic scribing methods, CNC scribing machines have significant advantages such as fast processing speed, high repetition accuracy, good scratch consistency, and less damage. They are widely used in industries such as electronic manufacturing, new energy materials, display panels, semiconductors, optoelectronic devices, and high-end glass deep processing. It is one of the important equipment for achieving precision scribing and automated production.

United States market for CNC Scribing Machine is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
