A CNG gas volume indicator, also known as a CNG flow meter or CNG fuel dispenser, is a device used to measure and display the quantity or volume of compressed natural gas (CNG) being dispensed or consumed. CNG gas volume indicators are commonly used in CNG fueling stations, where vehicles equipped to run on natural gas can refill their tanks. The indicators typically consist of a flow sensor or meter that measures the flow rate of the CNG, along with a display unit that shows the volume of gas being dispensed. They may also include additional features such as pressure and temperature sensors to provide more comprehensive monitoring of the CNG system. The primary purpose of a CNG gas volume indicator is to ensure accurate billing and control of CNG fuel consumption. They are essential for managing CNG inventory, tracking fuel usage, and maintaining efficient operation of CNG fueling stations or other applications where CNG is dispensed.

United States market for CNG Gas Volume Indicator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
