The global Co-Extrusion Lamination Machine for Packaging market size is predicted to grow from US$ 101 million in 2025 to US$ 145 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2024, global Co-Extrusion Lamination Machine for Packaging production reached approximately 247 units, with an average global market price of around K US$ 392.1 per unit. Co-Extrusion Lamination Machine for Packaging is a specialized industrial equipment designed to produce high-performance multi-layer composite packaging materials by integrating co-extrusion and lamination processes in a single production line. Its core structure includes multiple extruders, a multi-manifold or feedblock die head, a laminating station, a cooling system, and a winding unit. This structure enables the production of composite packaging materials with tailored properties (e.g., moisture resistance, oxygen barrier, puncture resistance, or heat sealability) in one step, making it widely used in the packaging industry for manufacturing high-demand products such as food packaging (e.g., retort pouches for ready meals, vacuum-sealed meat bags), medical packaging (e.g., sterile device pouches), and industrial packaging (e.g., chemical drum liners), while reducing production steps, lowering material waste, and avoiding environmental risks from solvent-based adhesives.

United States market for Co-Extrusion Lamination Machine for Packaging is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
