The global Co-free Maraging Steel Powder market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The role of cobalt in maraging steel is to form intermetallic compounds with other elements in the steel, such as nickel and iron. These intermetallic compounds contribute to the strength and hardness of the steel, making it ideal for applications where high strength and toughness are required, such as in aerospace, defense, and automotive industries. However, cobalt is an expensive and strategic metal with limited availability, and there are concerns about its environmental and health impacts. As a result, there is a growing interest in developing cobalt-free maraging steels as a more sustainable and cost-effective alternative.
