The global CO2 Capture and Storage Technology market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

CO2 Capture and Storage (CCS), is a set of technologies and processes aimed at capturing carbon dioxide (CO2) emissions from industrial and energy-related sources, utilizing the captured CO2 for various purposes, and storing it underground in a secure and permanent manner.

The goal of CCS is to reduce greenhouse gas emissions, particularly CO2, by capturing and storing it before it enters the atmosphere. It is considered a critical technology for achieving deep decarbonization and meeting climate change mitigation targets. CCS can help industries transition to lower-carbon operations while maintaining reliable energy supplies and supporting economic growth."

CCS development has gained significant momentum in recent years, driven by strengthened climate targets and subsequently increased policy support for the technology around the world. In 2022, 61 new CCS facilities? were added to the project pipeline globally, bringing the global total of CCS projects to 30 in operation, 11 under construction and 153 in development. The US already has more CCS projects than any other country?, and its landmark Inflation Reduction Act of 2022 is expected to drive? further deployment of the technology in the coming years.

In Europe?, countries including the UK, Netherlands and Norway are looking to develop CCS in regional industrial clusters, in which multiple emitters can benefit economically from shared transportation and storage infrastructure.
