The global CO2 Degasifier market size is predicted to grow from US$ 397 million in 2025 to US$ 529 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

In municipal and industrial settings, the most common cause of acidity in water is aqueous carbon dioxide. High enough concentrations of CO2 can lower the pH levels of water to a point that corrodes pipes and machinery or harms fish grown in aquaculture.In cases where high levels of CO2 is present in water, a carbon dioxide stripping system will keep pipes intact and fish healthy. CO2 degassing systems strip the CO2 from the water, making it possible to balance the water's pH level.CO2 degasifiers, or carbon dioxide strippers, are one of the most cost-effective ways to remove CO2 from water.
