According to our LPI (LP Information) latest study, the global CO2 Laser market size was valued at US\$ 3318.2 million in 2023. With growing demand in downstream market, the CO2 Laser is forecast to a readjusted size of US\$ 4152.9 million by 2030 with a CAGR of 3.3% during review period.

The research report highlights the growth potential of the global CO2 Laser market. CO2 Laser are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of CO2 Laser. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the CO2 Laser market.

CO2 lasers contain an active laser medium, which is a gas discharge. These lasers are preferred over other lasers such as excimer lasers because they are more reliable, efficient, robust, and easier to operate than other lasers. They are mainly used for cutting and welding applications in industries such as manufacturing, automotive, electronics, healthcare, and telecommunications due to their superior performance, compact size, high output power, and durability. CO2 lasers produce infrared radiations of wavelength between 9 microns and 11 microns with the help of different isotopes in the gain medium (a gas mixture of CO2, nitrogen, and helium).

According to the report, one driver in the market is change in energy mix – demand from wind energy. In wind energy, wind tower fabrication requires the formation of huge tubular shapes from individual cans. Internal and external longitudinal welding is required for the cans while welding, tacking, and forming of external and internal

circumferential joints are essential for the formation of the tower. Foundation flanges, port-holes, and subcomponents are some other areas that require welding solutions. Advanced automation is essential to obtain better, and repeatable welding results. Hence, the welding process equipment comprises a system of components, each customized for its respective function.
