The global CO2 Laser Power Meter market size is predicted to grow from US$ 190 million in 2025 to US$ 278 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2024, global production of CO2 Laser Power Meter reached approximately 23,000 units, with an average selling price of approximately US$8,000 per unit. CO2 Laser Power Meter is a device used to measure the optical power output of carbon dioxide lasers. It is a specialized laser power meter designed and calibrated specifically for the wavelength (typically 10.6 microns) and power range of CO2 lasers. The instrument, consisting of a sensor and display, converts laser energy into a measurable electrical signal using a sensor such as a thermopile or photodiode. This instrument is used to monitor the performance and stability of CO2 lasers in fields such as machining, medical treatment, and scientific research.

The upstream core of the CO2 Laser Power Meter is comprised of suppliers of raw materials and core components, primarily thermocouple materials, high-absorptivity coating materials, alumina ceramic bases, precision resistors, water cooling units, signal amplifier chips, and instrument housings used to manufacture thermopile sensors. Its downstream applications include direct applications in industrial processing (such as power monitoring and maintenance of laser cutting and welding equipment), medical aesthetics (energy calibration of laser surgical equipment), and scientific research (laboratory optical path debugging and measurement).

United States market for CO2 Laser Power Meter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
