The global CO2 Laser Welding Machine market size is predicted to grow from US\$ 459 million in 2025 to US\$ 729 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

CO2 Laser Welding Machine is a precision processing equipment that uses CO2 gas as a working medium and achieves material connection through the high energy density of the laser beam. Its working principle is to excite CO2 gas to generate laser under the action of an electric field, and then form a highly concentrated energy spot after being focused by an optical system, so that the welded material is partially melted or vaporized, thereby achieving metallurgical bonding between atoms.

R&D activities continue to improve CO₂ laser welding machine technology, such as higher power output, enhanced beam quality and improved beam delivery system, which expands its application range. At the same time, manufacturers are increasingly focusing on developing energy-saving and sustainable carbon dioxide laser systems to meet environmental protection needs. The application of CO₂ laser welding machines in the automotive, aerospace, electronics, medical and other industries continues to deepen and expand. For example, in automobile manufacturing, it is used for welding of body frames, engine components, etc.; in the electronics field, it is used for microelectronic device packaging, lithium battery tab welding, etc. With the development of industrial automation, CO₂ laser welding machines are increasingly integrated with automated production lines, realizing automated control and intelligent production of the welding process, improving production efficiency and welding quality, and reducing labor costs.
