The global CO2 Logger market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A CO2 logger is a device used to measure and record changes in CO2 concentration in the environment over time.

The values measured by the CO2 logger can be checked on the display of the device itself. However, changes in the values over time are recorded as data in the device and can be output for analysis.

In the past, the main method was to record data to a recording medium in the device itself and retrieve it. However, in recent times, there are also models available in the market that allow remote monitoring of values using technologies like Bluetooth, Wi-Fi, and others.

United States market for CO2 Logger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CO2 Logger is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
