The global CO2 Mineralization Reactor market size is predicted to grow from US$ 411 million in 2025 to US$ 1080 million in 2032; it is expected to grow at a CAGR of 15.4% from 2026 to 2032.

In 2025, global CO2 Mineralization Reactor production reached approximately 1,680 units, with an average global market price of around USD 250,000 per unit.

The gross profit margin of major companies in the industry is between 25%–40%.

In 2025, the global production capacity of CO2 Mineralization Reactor was approximately 2,210 units.

A CO2 Mineralization Reactor is industrial equipment designed to accelerate the reaction between captured carbon dioxide and mineral-rich feedstocks, producing stable carbonate compounds and enabling long-term carbon storage or utilization. The reactor provides controlled conditions for gas-liquid-solid reactions, including optimized temperature, pressure, mixing, residence time, and contact area. Depending on the process, feedstocks may include alkaline industrial residues, mineral materials, slags, ashes, or other calcium- and magnesium-rich substances. CO2 Mineralization Reactors are mainly used in carbon capture and utilization, low-carbon construction materials, industrial waste treatment, and permanent carbon removal applications. Product configurations include batch, continuous, stirred, and specialized gas-solid or slurry reactors.

The upstream industry supplies pressure-resistant reactor vessels, corrosion-resistant materials, mixing systems, pumps, valves, gas-handling equipment, sensors, control

systems, and mineral feedstocks. The midstream industry integrates these components into mineralization reactors and complete reaction units, with processes covering reactor fabrication, internal assembly, instrumentation, control integration, pressure testing, and commissioning. Products are differentiated by processing capacity, reactor configuration, operating pressure, temperature range, and feedstock compatibility. Downstream applications include carbon dioxide utilization, carbon removal projects, construction-material production, industrial residue treatment, and mineral carbonation facilities. Demand is driven by carbon reduction targets, carbon removal deployment, utilization of alkaline waste streams, and growing demand for permanent CO2 storage.

United States market for CO2 Mineralization Reactor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CO2 Mineralization Reactor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
