The CO2 check valve is a directional control valve used to control carbon dioxide gas. It allows the gas to flow in one direction only and not in the reverse direction. The working principle of the CO2 one-way valve is to use spring or gravity to control the opening or closing of the valve disc, thereby achieving automatic control of gas. CO2 one-way valve is mainly composed of valve body, valve disc, spring or weight. There are many types of CO2 one-way valves. According to different structures, they can be divided into spring type, gravity type, swing type, plastic diaphragm type, etc.
