The global CO₂ Pipeline Transport Service market size is predicted to grow from US\$ 4770 million in 2025 to US\$ 7764 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

CO₂ Pipeline Transport Service refers to the industrial logistics service that transports carbon dioxide (CO₂) from capture sources or production sites to storage, containment, or utilization sites via dedicated high-pressure pipelines. This service is widely used in carbon capture and storage (CCS), enhanced oil recovery (EOR), and industrial CO₂ distribution to ensure the safe, continuous, and efficient transport of CO₂. Its upstream includes manufacturers of CO₂ capture equipment, compression systems, and suppliers of pipes and valves; its downstream primarily serves storage site operators, oilfield development companies, industrial gas users, and related pipeline operation and management companies. With the development of global carbon neutrality and low-carbon technologies, CO₂ pipeline transport services are becoming a crucial infrastructure link in the carbon management industry chain, and their safety, stability, and cost control capabilities directly impact the operational efficiency of the entire carbon capture and utilization system.

The CO₂ Pipeline Transport Service is expected to expand significantly as global carbon capture, utilization, and storage (CCUS) deployment accelerates, driven by climate policy targets, industrial decarbonization mandates, and commercial utilization pathways such as enhanced oil recovery (EOR) and permanent geological storage. Future development will see increased investment in network expansion to connect dispersed industrial CO₂ sources with shared trunk lines and storage hubs, improving economies of scale and reducing per-ton transport costs. Regulatory frameworks and carbon pricing mechanisms will further support long-distance transport infrastructure,

while technological advancements in pipeline materials and monitoring systems will enhance the safety, reliability, and cost-effectiveness of CO₂ transmission. Cross-border and interregional pipeline linkages are also likely to emerge, enabling greater flexibility in sequestration options and fostering regional CO₂ markets. As infrastructure matures, integrated service models encompassing capture, transport, and storage will become more prevalent, facilitating more predictable cash flows and reducing risk for investors and industrial participants.
