CO? recovery unit is a kind of equipment used to recover carbon dioxide, which is widely used in industrial production, energy generation and environmental treatment. It extracts CO? from flue gas, industrial emissions or air through chemical absorption, physical adsorption, membrane separation or condensation, and further purifies it and uses it in the production of industrial products (e.g. carbonated beverages, chemical synthesis) or realizes sequestration to reduce carbon emissions. Inside the recovery unit, the gaseous CO? is cooled and compressed to produce liquid CO?, which is then piped directly back to the dry ice pelletizer.
