The global Coal-Based Ethanol market size is predicted to grow from US\$ 1705 million in 2025 to US\$ 19151 million in 2032; it is expected to grow at a CAGR of 41.5% from 2026 to 2032.

In 2025, global Coal-Based Ethanol sales volume was approximately 2.05 million tons, with an average global market price of about USD 850/ton. The gross margin of major producers was generally around 18%-30%.

Coal-Based Ethanol is a type of synthetic ethanol produced with coal as the initial feedstock. It is typically produced by gasifying coal into syngas, followed by conversion through intermediates such as methanol, dimethyl ether, acetic acid and methyl acetate to obtain ethanol. Its main product forms include hydrous ethanol, anhydrous ethanol and high-purity anhydrous ethanol. Compared with grain-based ethanol, Coal-Based Ethanol does not rely on agricultural products such as corn or sugarcane, and represents an important route for extending coal chemical industry chains into fuels and basic chemicals.

The upstream of the Coal-Based Ethanol industry chain mainly includes coal, coke oven gas, coal-based methanol, acetic acid, acetates, hydrogen, catalysts, gasifiers, hydrogenation reactors and other supporting equipment. The midstream consists of coal chemical enterprises producing ethanol through carbonylation, hydrogenation, separation and refining processes. The downstream applications mainly include transportation energy, chemical, industrial manufacturing, medicine and health, and daily chemical and cleaning fields. The value of the industry is mainly concentrated in coal-based feedstock integration, catalyst technology, large-scale production facilities and low-cost stable supply capability.

United States market for Coal-Based Ethanol is estimated to increase from US\$ million
