PBAT(Polybutylene Adipate Terephthalate) is a commonly used synthetic polymer material, a copolymer of butylene adipate and butylene terephthalate. This copolymer structure gives PBAT unique physical and chemical properties. The PBAT molecular chain has good flexibility and excellent film-forming properties. It is widely used in the fields of ground film, film bag packaging, etc. It is one of the fastest-growing and most widely used biodegradable plastics. In the field of plastic manufacturing, coal can be converted into various petrochemical raw materials through a series of complex chemical processes, which can then be used to synthesize different types of plastics, including biodegradable plastics. Coal-based PBAT biodegradable plastics refer to PBAT biodegradable plastics prepared by chemical processing or conversion using coal as the main raw material or starting material. This report focuses on coal-based PBAT biodegradable plastics.
