Coal briquetting crushing activated carbon is made from coal raw materials through a series of processes. Firstly, the coal raw materials are carbonised at high temperature under air-isolated conditions, and then oxidatively activated with gases (e.g., air, carbon dioxide, water vapour or a mixture of all three) at a certain temperature in order to produce a well-developed structure with micropores. Finally, it undergoes briquetting and crushing processes to obtain the desired particle shape and size.
