Coal coking is also called coal high temperature dry distillation. It is a coal conversion process that takes coal as raw material, heats it to about 950°C under air-isolated conditions, produces coke through high-temperature dry distillation, and simultaneously obtains gas, coal tar and recovers other chemical products. The main use of coke is ironmaking, and a small amount is used as chemical raw materials to make calcium carbide and electrodes. Coal tar is a black viscous oily liquid, which contains important chemical raw materials such as benzene, phenol, naphthalene, anthracene, phenanthrene, etc. They are raw materials for medicine, pesticides, explosives, dyes and other industries, and can be separated one by one after proper treatment.
