Coal-fired power generation drives steam turbines by generating high-temperature, high-pressure steam, and the higher the temperature and pressure of steam, the higher the efficiency of power generation.

First of all, Coal Fired Generation is the traditional power generation technique. The expansion of Coal Fired Generation market is caused by price of coal and availability?unlike the natural gas used in generating, which increasing the cost of generation. More Important?PCC (pulverized coal combustion) and cyclone furnace are environmentally friendly?these technologies can reduce the emission of carbon dioxide and Sulfur dioxide and provide good environment for people. In addition,the Coal Fired Generation market is divided into different regions ,especially in Asia Pacific, this region

dominated the global coal fired generation market due to increasing demand for electricity and availability of coal. While some countries in Europe witness a decrease in demand for Coal Fired Generation owing to non-polluted renewable energy.
