Coal tar creosote is a brownish-black/yellowish-dark green oily liquid with a characteristic odour, which is a mixture of several hundred, probably a thousand chemicals.

Coal tar creosote is only slightly soluble in water and soluble in a variety of organic solvents and it is obtained by the fractional distillation of crude coal tars. The approximate distillation range is 200-400°C. The chemical composition of creosote is influenced by the origin of the coal and also by the nature of the distilling process; as a result, the creosote components are rarely consistent in their type and concentration.

Global Coal Tar Creosote key players include R?TGERS Group, Koppers, Himadri Chemicals & Industries, China Steel Chemical Corporation, Mitsubishi Chemical, etc. Global top five manufacturers hold a share about 50%.

India is the largest market, with a share about 30%, followed by Europe, and North America, both have a share about 35 percent.

In terms of product, Heavy Creosote Oil is the largest segment, with a share over 70%. And in terms of application, the largest application is Carbon Black, followed by Wood Preservative, etc.
