Li-ion Battery Separator is a kind of microporous film which main matrix is polyolefine film, it has manufactured by one-step or two-step stretching in hole craft and had ion pass-through function, in the li-ion battery it has played a role of separate positive pole and negative pole of battery to avoid short circuit. Following the development of technology of separator there has gradually derived some new types of li-ion battery separator, such as PP/PE/PP compound separator, ceramic coating separator resistance to high temperature and PVDF coating separator with high performance.

Lithium Battery Ceramic Separator is based on dry, wet and non-woven fabrics, and is coated with inorganic ceramic particle layers (such as high-purity alumina, boehmite, SiO₂, etc.) to prepare composite multi-layer separators. , The ceramic composite separator realizes the performance complementarity between materials, which can meet the needs of new lithium-ion batteries with high safety and high-power rapid charge and discharge.
