The global Coating Durability Testing market size is predicted to grow from US\$ 6854 million in 2025 to US\$ 9338 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Coating durability testing refers to the evaluation and assessment of the long-term performance, resistance, and stability of protective coatings applied to various surfaces, such as metals, polymers, or concrete. The purpose of these tests is to simulate and predict how coatings will withstand environmental conditions, exposure to chemicals, temperature variations, abrasion, and other factors over an extended period.

Testing standards, such as those established by organizations like ASTM International, are periodically updated to reflect advances in materials science and testing methodologies. Look for trends in the development of new or revised standards for coating durability testing.
