The global Coating Grade Cellulose Ether market size is predicted to grow from US\$ 543 million in 2025 to US\$ 805 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Because cellulose ether in latex paint can play a role in improving the construction performance of latex paint, prevent spatter, improve storage, improve covering power, and has the effect of improving surface tension and pH stability, and improve the compatibility of metal color material, so it is often used as the first choice of coating thickener.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
