Coating Thickness Meters, also known as coating thickness gauges or paint meters, are instruments used to measure the thickness of a coating on a substrate. The thickness of the dry film is a critical measurement in the coatings industry because it affects the coating process, quality, and cost. These meters can use destructive methods, where the coating is cut to the substrate, or non-destructive methods, which do not damage the coating or substrate, such as magnetic, magnetic induction, and eddy current thickness measurement methods.

The global Coating Thickness Meters market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
