Coaxial Dual Junction Isolator is a key device used in microwave and millimeter-wave systems. It has two magnetic junctions and is capable of achieving unidirectional signal transmission while isolating the reverse transmission signal. This type of isolator typically employs magnetic materials to absorb and convert the magnetic field energy of the reflected signal, converting it into thermal energy for dissipation, thereby preventing the reflected signal from interfering with the system. It is widely used in microwave communication, radar systems, satellite communication and other fields, featuring high isolation, low insertion loss, wide frequency range and high power handling capacity.

United States market for Coaxial Dual Junction Isolator is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Coaxial Dual Junction Isolator is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Coaxial Dual Junction Isolator is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
