The coaxial electric drive axle is an integrated electric vehicle drive system that combines the motor, reducer and drive axle into one, aiming to improve the performance and efficiency of electric vehicles. The core feature of this system is that the motor is coaxially arranged with the axle, which has the advantages of compact structure, weight reduction and improved transmission efficiency. By reducing the number and complexity of components in traditional drive systems, the coaxial electric drive axle can not only save space, but also reduce manufacturing and maintenance costs. In addition, the integrated design makes power transmission more direct and effectively reduces energy loss, thereby improving the vehicle's range and overall power performance.

The global Coaxial Electric Drive Axle market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
