A coaxial lens mount is a device used to mount and support a lens, often used in optical instruments and equipment. It consists of two coaxial metal rings holding a lens between them. One of the rings is fixed, and the other ring can be rotated or adjusted to adjust the focal length of the lens. The coaxial lens mount is designed to simplify lens adjustment and focusing. By rotating or moving the adjustable ring, the relative position of the lens to the light can be changed, thereby changing the focal length of the lens. In this way, the user can easily adjust the position of the lens in order to achieve the desired optical effect. Coaxial lens mounts are widely used in camera lenses, telescopes, microscopes and other optical instruments. They are usually made of high-

quality metal for stable support and precise adjustment. Some coaxial lens mounts are also equipped with scales or rulers so that the user can adjust the lens position more accurately. In a word, the coaxial lens holder is a device for installing and adjusting the lens, which simplifies the adjustment process of the lens and enables the user to easily achieve the desired optical effect.
