The global Coaxial Parallel Light Source market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Coaxial parallel light source is a coaxial light source with collimated light. Its light source is square and consists of a point light source with a Fresnel lens or a convex lens, and a semi-transparent and semi-reflective spectroscopic structure (beam splitter or beam splitter prism) at the front end. Coaxial parallel light source uses scattered light emitted by high-power and high-brightness LED light source to form parallel light after passing through a special lens module and optical glass. It has the characteristics of high-density LED array, advanced coating spectroscopic, unique heat dissipation structure, and highlighting the uneven surface of objects. It is widely used in the field of machine vision, including QR code detection, silk screen positioning, beverage bottle mouth detection, chip wafer damage detection, etc.

United States market for Coaxial Parallel Light Source is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
