The global Coaxial Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Coaxial valve is a common type of valve, and its working principle is to control the flow of medium by rotating the valve core. The coaxial valve is composed of valve body, valve cover, valve core, sealing ring and other components, among which the valve core is the key component, which controls the flow of the medium through rotation. The spool of a coaxial valve consists of two cylindrical parts, an inner cylindrical part and an outer cylindrical part. The inner cylindrical part is called the spool shaft and the outer cylindrical part is called the spool sleeve. There is a gap between the spool shaft and the spool sleeve, through which the medium flows.

United States market for Coaxial Valve is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
