Coaxial Wire and Cable is a cable that transmits high-frequency electromagnetic waves. It consists of a center conductor, an insulator, a metal shield, and an outer sheath. The center conductor is usually made of copper or copper alloy and is used to transmit signals; the insulator is used to isolate the center conductor and the outer shield; the metal shield (usually copper mesh or aluminum foil) is used to reduce electromagnetic interference; the outer sheath is a plastic layer to protect the cable.

Coaxial cables are widely used in television signal transmission, computer networks, radar systems, satellite communications and other fields. In daily life and work, you may come into contact with coaxial cables in electronic products, network equipment or communication facilities.
