The global Cobalt-60 for Gamma Knife market size is predicted to grow from US\$ 89.50 million in 2025 to US\$ 127 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Cobalt-60 for Gamma Knife refers to sealed radioactive cobalt-60 sources specifically designed for use in Gamma Knife stereotactic radiosurgery systems. Through radioactive decay, cobalt-60 emits high-energy gamma rays with principal energies of approximately 1.17 MeV and 1.33 MeV. Multiple gamma-ray beams are collimated and focused on a precisely defined intracranial target, delivering a high radiation dose to the lesion while minimizing exposure to surrounding healthy tissue. Gamma Knife systems are widely used for the non-invasive treatment of brain tumors, arteriovenous malformations (AVMs), trigeminal neuralgia, and various functional neurological disorders. Cobalt-60 sources used in Gamma Knife equipment must meet stringent requirements regarding radioactivity, source geometry, encapsulation integrity, and radiation safety to ensure treatment accuracy and operational reliability.

In 2025, global Cobalt-60 for Gamma Knife production reached approximately 3.5 million Curie, average price was 26.14 USD/Curie, with gross margin 40%

The global Cobalt-60 for Gamma Knife market remains a niche but strategically important segment within the medical isotope industry. Demand is primarily driven by the installed base of Gamma Knife radiosurgery systems, particularly in neurosurgery applications for treating brain tumors, vascular malformations, and functional neurological disorders. Since Cobalt-60 sources require periodic replacement due to radioactive decay, the market benefits from a stable replacement cycle rather than relying solely on new equipment installations. Supply remains highly concentrated

among a limited number of nuclear reactors and isotope producers, creating high barriers to entry and making long-term supply security a key concern for healthcare providers. Looking ahead, increasing demand for non-invasive cancer treatments, expanding healthcare infrastructure in emerging markets, and continued utilization of stereotactic radiosurgery are expected to support moderate market growth. However, competition from advanced linear accelerator (LINAC)-based radiosurgery systems and stringent regulatory requirements may constrain expansion.
