Carbonyl cobalt powder is an inorganic metal complex with a chemical formula of $\text{Co}_2(\text{CO})_8$. It appears as an orange-red crystalline powder, insoluble in water, but soluble in most organic solvents, such as ethanol, ether, benzene, carbon disulfide, naphtha, etc.

Carbonyl cobalt powder is mainly used to refine metallic cobalt, and can also be used as a covering on the surface of metals and a catalyst for chemical synthesis. In addition, it can also be used to synthesize multinuclear cobalt-containing carbonyl clusters. During the reaction, the carbonyl group is removed by oxygen transfer agents or heating, thereby making the metal center unsaturated and reacting to synthesize multinuclear or heteronuclear carbonyl clusters. In specific applications, carbonyl cobalt powder can also be used as a solid-phase reaction complexing agent, as well as the preparation of gasoline antiknock agents and high-purity cobalt salts.

The global Cobalt Carbonyl Powder market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
