The cochlear implant (bionic ear) is a surgically implanted neurological prosthesis that provides sound perception for people with moderate to severe sensorineural hearing loss. The cochlear implant (bionic ear) system consists of two main components, the internal component is the implant and the external component is the sound processor. The external component is usually worn behind the ear, but can also be attached to clothing. The internal component, the actual in-ear component, contains the coil that receives the signal, the electronics, and the electrodes placed inside the cochlea to stimulate the cochlear nerve.

Through daily hearing and auditory training, cochlear implants allow children and adults alike to learn how to interpret these signals into sounds and sounds.
