COD degradation agent is an environmentally friendly water treatment agent specially used to reduce the chemical oxygen demand (COD) in water bodies. It can convert organic and inorganic pollutants in water bodies into harmless or low-toxic substances through chemical reactions or biological effects, thereby reducing the COD value of water bodies and improving water quality. COD degradation agent has the characteristics of high efficiency, rapidity, stability, non-toxicity and harmlessness. It can be widely used in industrial wastewater treatment, urban sewage treatment, agricultural wastewater treatment and other fields. It is of great significance to protect the environment, save water resources and promote sustainable development. At the same time, with the continuous improvement of environmental awareness and the increasingly stringent environmental protection regulations, the research and development and application of COD degradation agents will also receive more and more attention and attention.
