With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Code Audit Service is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Code Audit Service market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Code Audit Service are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Code Audit Service. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Code Audit Service market.

Code audit service is a service that conducts a comprehensive technical inspection of the source code of software systems, networks, and mobile applications to assess the quality, risk, and security of the code. Code audit services usually include the following aspects:

Code Quality Inspection: Evaluate whether the code complies with coding standards and best practices, is easy to maintain and extend, and contains redundant or useless code.

Security check: Check whether the code has potential vulnerabilities or threats, whether it follows the industry-standard encryption method, and whether the privacy of user data is protected.

Performance evaluation: Test the running speed and stability of the code in different scenarios, whether there is a problem of memory leak or resource waste, and whether it can withstand the pressure of high concurrency or large amount of data.

Technical documentation evaluation: Check whether the code has clear and complete comments and documentation, and whether it can help developers understand and modify the code.

Third-party service integration analysis: Evaluate whether the third-party service or library used in the code is compatible with the existing software, whether it can provide the required functions, and whether there are better alternatives.

Software architecture evaluation: analyze the overall structure and design of the code, whether it conforms to the principles of software engineering, and whether it can support the future development and changes of the software.
