A Coercive Force Meter is an instrument used to measure the coercive force of magnetic materials. Coercive force is the magnetic field strength required to reduce the magnetization of a magnetic material from saturation to zero. This instrument is essential for research, development, and quality control of magnetic materials.

The industry trend for Coercive Force Meters is primarily driven by the expanding applications of magnetic materials and the demand for higher-performance magnetic materials. Upstream suppliers are focusing on developing instruments with higher precision, faster measurement speeds, and broader measurement ranges. Downstream users, including magnetic material manufacturers, electronic device producers, and research institutions, are seeking more reliable and user-friendly instruments to support their research and production efforts. The future market size of Coercive Force Meters is expected to continue growing, driven by the expanding applications of magnetic materials in various fields.
