Coil spring washers, also known as helical spring washers or split lock washers, are mechanical devices used in various fastening applications to prevent bolts or nuts from loosening due to vibration or torque. They are made from a coil of metal, typically steel, that is cut at an angle to create a split in the washer. When the washer is compressed during tightening, it exerts a spring-like force against the nut or bolt, increasing the friction between the threads and enhancing the overall locking effect. This helps to maintain the integrity of the assembly and prevents the fasteners from coming undone under stress.

The global Coil Spring Washers market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
