A coining press is a machine used in the manufacturing industry to shape metal or other materials into precise, customized forms. It applies pressure to a workpiece or blank using a die set, creating a highly accurate and intricate design or pattern. Coining presses are commonly used in the production of coins, medals, jewelry, and small metal parts requiring tight tolerances and well-defined features. These presses utilize extreme pressure and controlled force to reshape the material without causing excessive stretching or deformation, resulting in finely detailed and dimensionally consistent products.

The industry trend of coining presses is characterized by advancements in automation, precision, and versatility. Modern coining presses incorporate computer numerical control (CNC) technology, allowing for precise control over the shaping process and reducing the need for manual intervention. The trend also involves the integration of
