A cold aerosol generator is a device used to produce fine mist or aerosol particles at low temperatures, often for the purpose of delivering substances such as medications, disinfectants, or other chemicals into the air or onto surfaces. Unlike hot aerosol generators, which use heat to create the aerosol, cold aerosol generators rely on mechanical methods such as ultrasonic waves, high-pressure air, or centrifugal force to produce the aerosol, thereby preserving the integrity of temperature-sensitive substances.

The global Cold Aerosol Generator market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
