Cold-Applied Liquid Roofing System is a seamless, monolithic roofing solution applied in liquid form without the need for heat or open flames. It is typically composed of polymers, resins, or elastomeric materials that cure to form a durable, flexible, and waterproof membrane. These systems are ideal for various roof substrates, including flat or low-slope roofs, and are valued for their ease of application, adaptability to complex roof designs, and reduced safety risks compared to traditional hot-applied methods. They provide long-lasting protection against weather, UV radiation, and ponding water while minimizing disruption during installation.
