The global Cold-applied Tapes market size is predicted to grow from US\$ 329 million in 2025 to US\$ 441 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

In 2025, global Cold-applied Tapes production reached approximately 160 million Sqm, with an average global market price of around US\$2.1 per Sqm. Cold-applied tape, also known as cold-applied anti-corrosion tape, refers to the adhesive tape used for anti-corrosion wrapping. ?Cold? means cold working operation, that means no fire, heating or curing is required during use. Cold-applied Tapes are used to protect pipelines against corrosion in various operating and environmental conditions around the world, both for new infrastructure and for the rehabilitation of existing ones.

The cold-applied tape market is experiencing steady demand driven by maintenance, retrofit and protective needs across construction, piping and equipment sectors, while supply remains concentrated among major adhesive manufacturers and specialized producers. Current trends emphasize higher-weatherability, improved low-temperature tack, environmentally friendlier formulations, and solutions that enable faster, standardized on-site installation to suit prefabrication and modular construction. Opportunities lie in replacement and refurbishment markets, rising building-efficiency retrofits, and procurement standardization that supports volume purchasing; key barriers include raw-material price volatility, cross-border trade and local certification hurdles, and tightening regulations on VOCs and recyclability. Competitive differentiation will hinge on adhesive chemistry and materials innovation, resilient supply chains, long-term partnerships with large contractors, and value-added services such as on-site testing and warranty systems. Macroeconomic cycles and the uneven pace of infrastructure investment remain downside risks to short-term demand.
